Customer Support Standard Operating Procedure

1. Purpose

This SOP defines the standard process for handling customer support requests.

2. Customer Greeting

Support agents should greet the customer professionally and confirm the customer's request.

3. Ticket Creation

A support ticket should contain the customer information, issue description, priority, and relevant supporting details.

4. Issue Classification

Agents should classify the issue according to its type, impact, and applicable support category.

5. Resolution

Agents should investigate the issue, provide appropriate troubleshooting, and document the resolution.

6. Ticket Closure

Tickets should be closed after the issue has been resolved and the required closure information has been recorded.
