Support Ticket Escalation Procedure

1. Purpose

This document defines support ticket priority levels and escalation procedures.

2. Priority 1

Priority 1 incidents represent critical issues affecting major services or a large number of users. These incidents require immediate escalation.

3. Priority 2

Priority 2 incidents represent significant issues that affect important functionality but do not cause a complete service outage.

4. Priority 3

Priority 3 incidents are lower-impact issues, general requests, or problems with available workarounds.

5. Escalation

Support agents should escalate tickets when the issue requires specialist assistance or cannot be resolved within the applicable support process.

6. Escalation Information

The escalation should include the ticket number, problem description, impact, troubleshooting already performed, and relevant evidence.
